Address:

4/A1, Javedan House, Plot # 4-E/II, Khayaban-e-Jami Commerical

Price:

Check with seller

Analogue control unit addressed to 1 Loop. It manages up to 240 devices on the Loop and 30 Zones

The SmartLight control panel is based on OpenLoop technology. Thanks to the many protocols supported by its detection Loop, SmartLight is capable of managing a wide range of detectors and accessory devices and thus offers maximum flexibility and ease-of-use.

SmartLight provides 2 supervised alarm outputs (alarm and fault) for the connection of audible-visual signaling devices, a powersupply output for ancillary devices and an output for the activation of external dialers. The control panel manages an ample spectrum of status signals: alarm, pre-alarm, fault, monitor, early warning, bypass, test, etc.
